FOR THE CLARION.] A Perennial Grass.

Peahaps to tell THE CLARION readers, who are farming and stock raising, of a perennial grass whose tops furnish good supply excellent hog food, in almost inexhaustible quantities, would be of interest to them, and especially those who have rich bottom lands that are frequently overflowed so as to render them profitess, or those who have arid, drouthstricken places that are void of verdure. The "drouth-proof grass" will supply the deficiency of such places. It sends its deeply penetrating roots for down into the outh after moisture in the devest places, and by being so deeply rooted it can bear repeated overflowings with comparatively no injury, and at the same time keep up a most vigorous growth, as though there were neither lood nor drought. Its roots are white, tender, from the size of a goose quill to that of one's linger, and penetrates from three to twelve feet deep, and yields from 1000 to 3000 bushels of hog feed per acre, which hogs eat as greedily as hey do sweet potatoes. The roots grow in joints of about two inches each, and each joint contains a germ, which, if cut off by itself will produce a bunch of grass. When it once gets a footbold it is at home, spreading by seeds and roots until it runs out everything else. Freezing, flooding, and continued drouths are | Times. alike harmless to it. It comes up early in the spring and stays until late in the fall, and may be cut for hav every four weeks from May until frost, making all the way from one to eight tons of hay per acre at a cutting, and that of excel ent quality. It should not be sown earlier than April or May, nor later than August or September. Plowing the land in spring, once in three or four years, assist it in keeping up its vigorous growth. All kinds of farm stock are fond of it, and it equals blue grass or timothy in milk and fat producing qualities, and horses, when not at work, keep grain being given them. When it goes rather than enter into any contest with fat and sleek on grazing it, without any to seed it frequently attains the height all the roots out of the land that can reasonably be found, just as good a stand of grass will come up, as grew there be-fore, and the tearing up the earth, after the roots, seems to act both as a cultivation and fertilization, for it will grow afterwards with renewed vigor. Where to Go in Sickness. 武器 Some years .: go the students of a certain college in the State of New York were in the habit of voting in the town, as they had a right to do, instead of at their homes. But, one year the political party against whom the students had usually voted, secured the control, and appointed two or three of their adherents guardians of the ballot-box. As one student after another presented his vote, one of these officials, a pompous, strutting man, challenged Several students had yielded the "loud" man. But, at last, there came up a homely, awkward gifted with a large stock of mother-wit: "Stop!" cried the pompous man, im peratively, as the student was about to vote. "Are you a voter, sir?"

"Yes sir,' drawled the student, "Where do you live?" demanded the man, thinking to make short work of this green youth.

"I mean, where do you reside?" "Why, at the college, sir." "You are a student there." "Yes, sir."

"You are merely a student, and, yet, claim to reside here?" "Yes, sir, I reside here. Where else should I live and attend this college?"
